## FOREWORD

Sandia National Laboratories in Albuquerque manages the Distributed Receiver Technology and Applications Project of the U.S. Department of Energy's Solar Thermal Technology Program. The project generally covers R&D on parabolic troughs and dishes. Technical information developed by these projects is disseminated through technical publications, workshops, presentations at technical meetings, and contractor reports. This document, which is a bibliography of solar thermal distributed receiver reports and publications by Sandia Laboratories and its contractors, is provided as a convenient reference for those interested in solar thermal technology. Reports are listed by principal author, by report numbers, and by unnumbered reports.

Reports that have not been published in a journal or proceedings (i.e., those bearing SAND or ALO document numbers) are generally available from the National Technical Information Service (NTIS) in McLean, VA, or the U.S. Department of Energy Technical Information Center (TIC) in Oak Ridge, TN.
